

A Petri Net

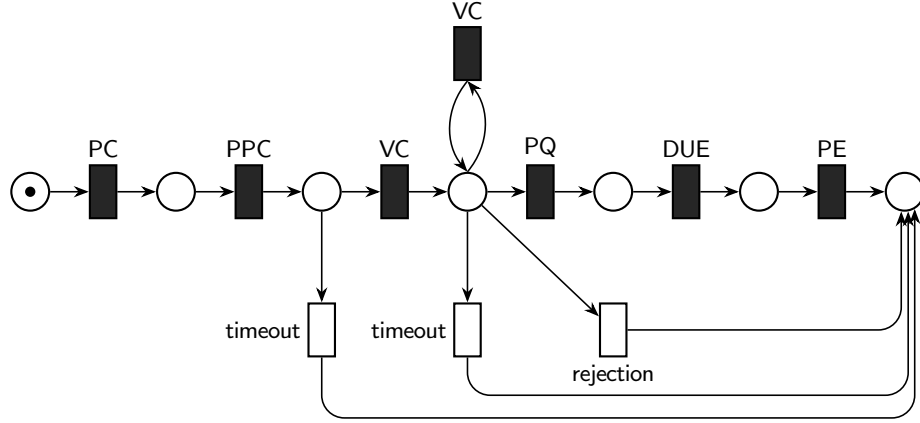

Fig. 4. Reference Petri net of the on-chain deployment lifecycle. Filled transitions correspond to on-chain events: PC = ProposalCreated, PPC = ProposalPackageCreated, VC = VoteCast, PQ = ProposalQueued, DUE = DeterministicUpgradeExecuted, PE = ProposalExecuted, the final event in (C1) in Table 3. Unfilled transitions are silent: **rejection** models a negative quorum (C2) in Table 3, requiring at least 1 vote; **timeout** models an expired voting period without majority (C3) in Table 3, which can happen with 0 or more votes. Initial marking: p_0 ; final marking: p_6 .
